

Scale AWS identity & data access governance

The Problem

- Security is a luxury that is often “deferred”
- AWS IAM is complex and full of gotchas
- Difficult to validate security policies
- Expensive security specialists overloaded
- Unexpected admins and excessive permissions go unnoticed
- Teams struggle to operationalize IAM security

Our Solution

- Simplify, automate, and scale AWS IAM security by expanding who can work with AWS IAM safely
- Enable the Cloud, DevOps, and Security engineers who manage security policies to secure access to AWS APIs & data quickly and accelerate delivery
- Transform regular engineers and auditors into productive security superheroes- no need to hire more experts

Simplify

- Built for non-experts to secure AWS IAM
- Simplified access capability model
- Enable security to (actually) be everyone's job

Automate

- Production ready Terraform & CDK libraries
- Least privilege policy generators
- Automated, continuous access review & alerting

Scale

- Integrate with existing tools & workflows
- Works with 10s of teams and 100s of resources
- Reports delivered in Excel, CSV, JSON, Parquet

Security Outcomes

Integrating k9 is the simplest & most effective way to achieve:

- **Visibility and Control:** Useful insights and secure management for dynamic cloud environments
- **Efficiency and Automation:** Streamline operations through automated processes
- **Compliance and Governance:** Ensure adherence to internal policies and regulations

Built to Integrate

Available in  AWS marketplace

*k9 usage included in AWS bill

About k9

We think people should have simple, actionable security information and controls wherever they interact with their cloud resources – whether that's in a security tool or somewhere else.

A lot of people like to say, “security is everyone's job.” Well, we are working to enable everyone to *do* that job. We have been integrating security into practitioners' existing workflows and delivery processes for more than 4 years.
